TOOLS YOU CAN USE

• **To learn more** about the dangers of backyard burning and disposal alternatives, visit EPA’s Backyard Burning Web site at <www.epa.gov/msw/backyard>. This site also provides brochures, and links to state environmental departments and their open burning regulations, as well as links to numerous local government programs, codes, and ordinances.

• **Earth 911** <www.earth911.org> has community- and state-specific recycling and disposal information by ZIP code. Or call 1-800-CLEANUP for the same information.

• **For more information** on dioxins, how they are formed, associated health effects, and other frequently asked questions, visit EPA’s Dioxin Web site at <www.epa.gov/ncea/dioxin.htm>.

• **Contact local officials** for more information on regulations and disposal alternatives in your community.

**WHAT YOU NEED TO KNOW TO PROTECT YOUR HEALTH AND THE ENVIRONMENT**

Burning household waste in burn barrels or open piles might be common in your community. But the smoke from these fires contains dangerous chemicals that affect your health and pollute our environment. Stopping backyard burning will help us all breathe easier.
Backyard burning is a more serious threat to public health and the environment than previously believed and has been banned by many state and local governments. Burning household waste produces many toxic chemicals and is one of the largest known sources of dioxins in the nation.

**Dioxins**

**What are dioxins?**
Dioxins are highly toxic, long-lasting organic compounds. They are dangerous even at extremely low levels and have been linked to several health problems, including cancer and developmental and reproductive disorders.

**How are dioxins formed?**
Dioxins are formed when products containing carbon and chlorine are burned. Even very small amounts of chlorine can produce dioxins. Because burn barrels do not have the same strict controls as municipal incinerators, barrel burning releases significant amounts of dioxins. Trying to prevent dioxins from forming by separating out items high in chlorine content is not effective, since low levels of chlorine are present in most household trash.

**How are we exposed to dioxins?**
Dioxins accumulate in the food chain. Airborne dioxins can settle onto feed crops, which are then eaten by domestic meat and dairy animals. Dioxins also can settle on water or enter waterways through soil erosion. These dioxins accumulate in the fats of animals, and then in humans when we consume meat, fish, and dairy products.

**What You Can Do**

- **Reduce.** You can reduce the amount of waste you generate by using durable, long-lasting goods and avoiding disposable items; buying products in bulk; and looking for products with less packaging.
- **Reuse.** Reusing items is another way to reduce the amount of waste you generate. Repair, sell, or donate used or unwanted items or organize a neighborhood swap event. One person’s trash is another person’s treasure!
- **Compost.** Composting is a great way to dispose of yard trimmings and food scraps, while creating a natural, free fertilizer. Many communities offer weekend classes on how to compost, and some even provide composting bins at a reduced cost or show you how to build your own.
- **Recycle.** Contact your local government to find out about curbside pick-up of recyclable materials or drop-off locations.
- **Properly Dispose of Waste.** Don’t litter or dump illegally. Use a waste collection service or take your waste to a transfer station, convenience center, or local landfill. Check with your local officials to learn about collection service and drop-off sites in your community.

**Other Air Pollutants**

Smoke from burn barrels contains hazardous pollutants such as particulate matter, sulfur dioxide, lead, mercury, and hexachlorobenzene. These pollutants can have immediate and long-term health effects such as:

- Asthma, emphysema, or other respiratory illnesses.
- Nervous system, kidney, or liver damage.
- Reproductive or developmental disorders.

Not only are the people who burn trash exposed to these pollutants, but so are their families and neighbors. Children, the elderly, and those with pre-existing respiratory conditions can be especially vulnerable.

**Ash**

The ash residue from backyard burning can contain toxic pollutants, such as mercury, lead, chromium, and arsenic, which can contaminate vegetables if scattered in gardens. Children can accidentally swallow toxic materials from dirt on their hands while playing near discarded ash.

For more information on these steps you can take, visit EPA’s Municipal Solid Waste Web site at <www.epa.gov/msw> and click on “Reduce, Reuse, and Recycle.”
The Colorado Department of Public Health & Environment’s Air Pollution Control Division and the Weld County Department of Public Health & Environment’s Environmental Health Services Division are responsible for the enforcement of Air Pollution Control Laws and Regulations in Weld County. Burning without a permit or burning improper materials may subject the responsible party to penalties from the Colorado Department of Public Health & Environment’s Air Pollution Control Division including fines between $100 & $10,000 per day, depending on the nature of the violation.

The unrestricted open burning of materials has been determined to be detrimental to the public health, environment and air quality. Open burning increases the pollutants in the atmosphere and is a general health hazard.

The Colorado Air Pollution Control Laws and Regulations generally prohibit open burning throughout the state unless a burn permit has been obtained from the appropriate air pollution control authority.

In cooperation with the Colorado Department of Public Health and Environment, the Weld County Department of Public Health and Environment regulates the open burning of any materials.

For those seeking a burn permit, additional information on open burning or to file a complaint, please contact the Weld County Department of Public Health and Environment’s Environmental Health Services Division at (970) 304-6415.

---

**Additional Information . . .**

Fines range from $100—$10,000 per day depending on the nature of the violation.
Burn Permits

Burn Permits are issued for compliance with air pollution control requirements.

A permit is issued for a specific 2 week period of time. A permit does not allow burning of any material other than those listed under allowable open burning.

Some municipalities (cities) or fire departments further restrict open burning. Check with your local municipality or fire department before applying for an open burning permit.

If your land is zoned “Agriculture”, then you may be able to burn ditches and open land weeds without a permit. “Ranchettes” and other rural developments may not be zoned “agriculture”.

ALLOWABLE OPEN BURNING

An open burning permit may be issued for weeds, small branches, leaves, garden debris and brush.

Private Household Trash: paper, cardboard, and untreated wood products are the only household trash that can be burned with a permit. Household trash also contains rubber, plastic, food wastes, wet paper, treated or coated wood products, and other materials which may not be burned.

NO PERMITS ISSUED FOR:

- Burning of buildings or structures for disposal
- Wood residue from volume wood or tree processing activities
- Rubber, plastic, food wastes, wet paper, treated or coated wood products, and other materials which may not be burned
- Burning if a practical alternative of disposal exists for any material being requested to be open burned.
- Areas where neighbors or close-by land owners have expressed concerns about burning for health reasons or general smoke nuisance.
- Commerciually derived materials (including landscape trimmings or waste)

IF ZONED “AGRICULTURE”

Agriculture burning is the burning of cover vegetation for the purpose of preparing the soil for crop production, weed control, cleaning irrigation ditches, and other agricultural cultivation purposes. Open burning may be allowed WITHOUT a permit in these instances. This does not include trash and areas around the house and yard.

NEVER BURN:

The following must never be burned, and a burning permit shall NOT be issued for any of the following: dump or landfill burning, plastic, tires, insulation on wire, car bodies, painted or treated wood (varnished or polyurethane coated plywood), creosoted posts, hazardous chemicals, paint, gasoline, diesel, motor oil, aerosol cans etc. which will yield large volumes of smoke and particulates.

ALTERNATIVES TO BURNING

- Composting
- Landfilling
- Chipping to make mulch, etc
- Cutting or mowing weeds prior to flowering or going to seed.
- Appropriate use of herbicides.
- Appropriate use of grazing herbivores.
- Burying weeds by turning under using a plow or other mechanical means.
- Taking garden/yard/vegetation or plant wastes to a community organic recycling or recovery site.
